Central banks were in general dovish. FED signals a neutral bias and a wait and see mode. Hiking of rates in 2019 by either FED or ECB were priced out by the market. Pay roll and ISM in the US were decent. After a period of government shut down in the US, one could expect weaker figures. Euro macro data has been on the weaker side though. This created a stellar month for many risk assets. 10yr treasury yields were down 5-10bp, credit spreads in US IG 25bp tighter and US HY 90bp tighter. EURO IG spreads were only tighter by 5bp, mainly due to a supply of bank bonds. EUR HY were 25bp tighter. Fixed income markets performed between 1-5 per cent return.

The fund participated in new Danske Bank and Sydbank bond issues at rich levels. The bonds have performed strongly in the market. We have reduced some of the risk added late December and early January due to strong performance. We do not think the market will return to the pre-sell off levels.

Norron Premium returned 1,1 per cent in January, after a weak December. Largest contributors were Candyking earnout bond, Neptune Energy and Enquest. On the negative side was Kongsberg Automotive, due to weak sentiment in the automotive sector. We still have strong liquidity in the fund, but also have several positions that can deliver nice returns if the market will continue to be strong.
